

FURNACE CHAINS FOR MULTIPURPOSE CHAMBER FURNACES

Type EURO: The standard chain, same design as IPSEN-chains, globally approved. Highly heat-resistant chain, mainly for use in carburizing, carbonitriding and hardening work.
(Material 50 % RA 310 / 50 % RA 333)

Type ULTRA: The reinforced chain for universal use at quenching and tempering, hardening and carbonitriding. **The charge weight can be increased by at least 25 % depending on the equipment.** Only one alloy is used for the chain.
(Material RA 310 / 1.4845)

Type DELUXE: The light one, mainly for the use at quenching and tempering of relatively low weights and high volume.
(Material RA 310)

All links are welded, except 3 end links which are splinted at one side for easy shortening of the chains.

AVION transfer chains – specifically designed for multipurpose chamber furnaces, sized to your individual batch weights.

LENGTHS/PITCH:

100 links	1 5/8"
76 links	2 1/2"

Further lengths and repair links upon request.
